

DEMO PROJECT 2: PEPSI COLA DEPO MANAGEMENT ERP

DESCRIPTION:

The Pepsi cola ERP is intended for managing the records from production to sales across different depots in different areas.

Records from production will be captured for a particular product and quantity. Distribution to the depots follows, the depot attendant must receive the quantity to be supplied even before delivery, and confirm restock if the match is met.

At every depot, daily sales are recorded, and amount sold so far must be recorded as well, and displayed as well, though the seller should be able to see their cumulative daily sales that should clear immediately at midnight.

A restock alert should happen if the current stock exceeds the minimum restock level.

REQUIREMENTS

1. Team discussion about the task (Both front and back end)
2. Individual implementation plan for the task. This will be discussed about and evaluated by the particular team (Front or back end)
 - ✓ For front end, each member should come up with a paper mock up and storyboard/site map for their implementation plan and it will be evaluated by the team (Focus on navigation and key files organization for reusability).
 - ✓ For back end, each member will come up with a logic plan or structure for their back-end logic, and clearly show how the database will handle the data, so all tables should be available, Logic can be presented with a flow chart.
3. Each team's agreed implementation plan. This will be discussed about by the whole team.
4. General implementation plan agreed upon by the team that will mark the final and ready for implementation.

DEADLINE: Friday @3pm, then we implement either on Friday or Saturday
